

TANGerINE @ CHI 2008

Saturday, 19 April 2008

Last Updated Wednesday, 20 May 2009

The florence crew of TANGerINE team (Stefano, Lea and Nicola) was at CHI 2008, to present our Work In Progress poster titled "Evolving TUIs with Smart Objects for multi-context interaction".

We had very nice feedbacks and contacts, the conference proved to be a stimulating place for sharing visions and insights.

Other projects and installations confirmed that there is a growing interest in applying sensor-enabled architectures in tangible interaction, and our exploration of the tabletop scenario has been welcomed as a promising and innovative research.

Here is the showreel related to our Poster presentation

We are now working on some technological advancements, as well as new collaborative applications! And in the meanwhile we relax diving into performing art with TANGerINE Theatre.

See you at CHI 2009!
